## ANALYTICS

Visualize and shape  
exposure of assets &  
instruments in real-time.

## TRADE WATCHER

Monitor trade activity such as exposure,  
profit & loss, floating & settled positions  
and receive real-time alerts based on  
various criteria set by the user.

## PRICE GUARD

Identify price market delays,  
price spikes, spread collisions  
and receive real-time alerts.

# CORE VALUES

## REAL-TIME

Dealio is using state-of-the-art technologies and the new http2 standard to provide blazing fast processing of events & data but also to support real-time monitoring & notifications.

## CROSS PLATFORM/DEVICE

Dealio can run across multiple device platforms, such as iOS, Android, and the Universal Windows Platform. Furthermore Dealio is responsive by design which supports a variety of devices and window or screen sizes such as a desktop, tablet, mobile and phablet.

## EVENT RULE ENGINE

Dealio provides a powerful rule engine which dynamically matches any predefined rules against real-time trade activity and generates events which are sent to users in the form of notifications & alerts.

## SMART BI/ANALYTICS

Gain complete insight to the information that matters to your company's future through our BI/Analytics platform. Aggregate, shape, transform and visualize your data in a couple of seconds.

## API-FIRST DESIGN

The API-first approach allows products to evolve into organic, self-organizing ecosystems that can grow to handle new and unforeseen demands. Dealio is using the OpenAPI specification which makes the integration with external systems extremely easy.

## SECURE BY DESIGN

Your data privacy & protection is our first priority. Dealio is using military-grade encryption to protect and secure your data.

Dealio is a **risk management cloud platform** which can **empower** a *financial institution*, a *liquidity provider*, a *bank* or a *brokerage* to **monitor, identify** and essentially **protect** your company from **financial risks**. Dealio has a **powerful rule engine** which **dynamically matches** any **predefined rules** against *real-time trade data* and **generates events**. Dealio's *real-time flagging* and *warning systems* along with its *smart analytics* and *reports* **provide a shield** for its users by **adding** an **extra layer** for **improving risk management**.
